

3rd February 2021

Procedure for loading CompuTutor 2021

Browser

We would suggest that you use Chrome browser to begin with. Other browsers should work as well, but we haven't had time to test them thoroughly.

Click on the link below to access the program:

<https://app-compututor.azurewebsites.net/>

We suggest that you bookmark this link so it can be activated from the Bookmarks panel on your browser.

The next step is to log in. We suggest you use GUEST5/g5 as the login for now. As soon as you log in, the system will begin downloading the content into your Browser cache. You can see the process happening in the small box at the bottom left of the screen. Depending on your connectivity, it may take between 20 mins and an hour. The total amount of disk space used by the program is about 1.7GB.

In a centre you can choose the second option which is to download the full program from Google Drive and then install it from one workstation to the next. This saves on the data cost. The full description for this option is provided in a separate document.

Once the program has been loaded it will check every time you log in and refresh with any new material or updates.

The small window in the bottom left of your Browser window will tell you how many of the total number of files have downloaded.

Please let me know of any problems and issues along the way. This has been a huge rebuild which began last July and will serve us well into the future.

Kind regards,

A handwritten signature in black ink, appearing to read 'Rob Stead', with a stylized, cursive script.

Dr Rob Stead
